

4.5.1 Operating the Lowering Side Rail

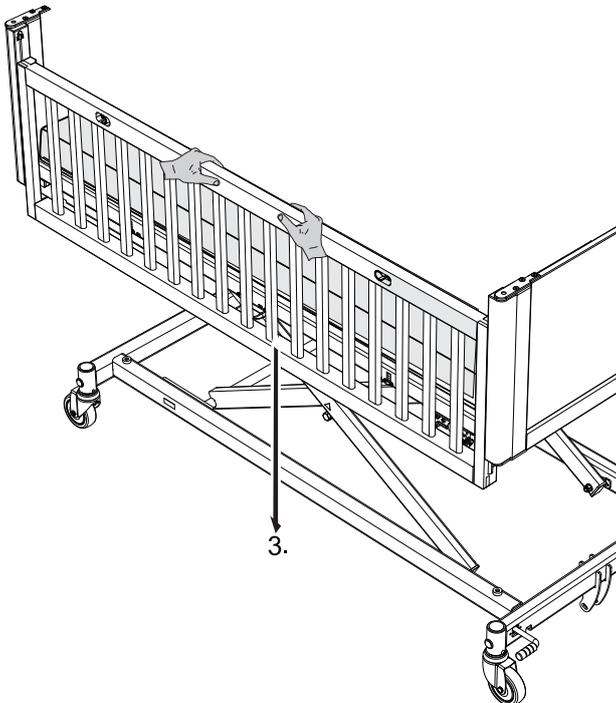

Lowering the Side Rail

1. Slightly pull and hold the top bar upwards with both hands
2. Push and hold the two latches towards each other.

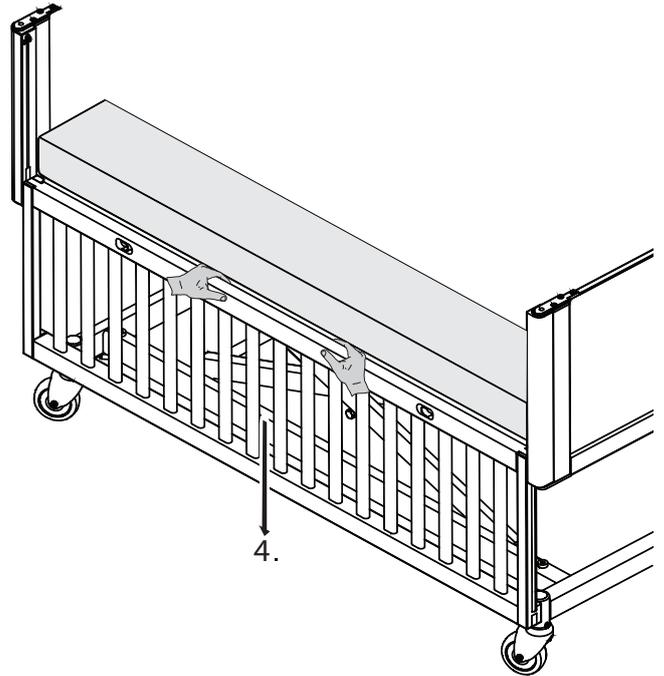

3. Slightly lower the side rail and release the two latches.

i Keep your hands out of the latches to ensure the side rail is correctly used.

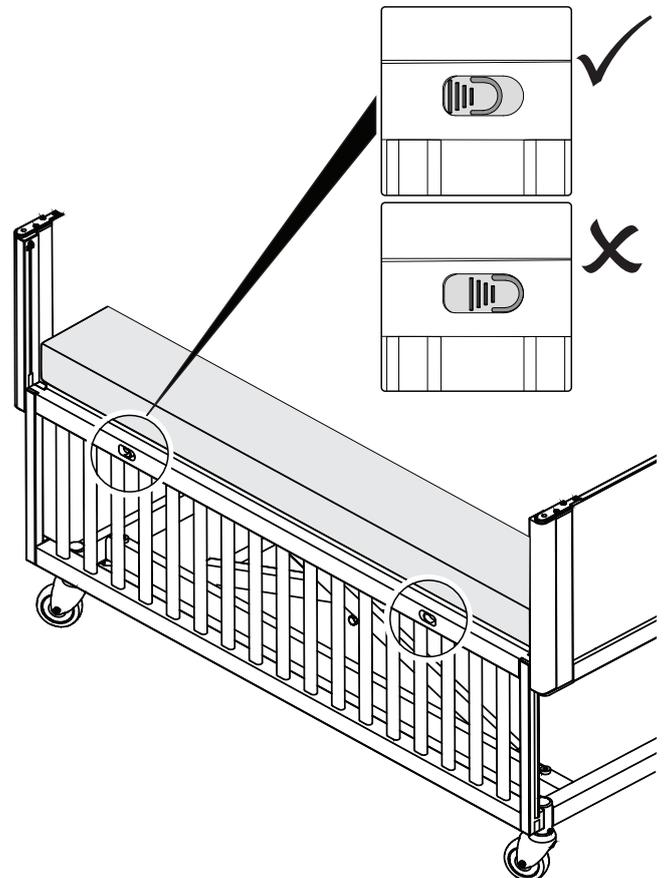

4. Continue lowering the side rail until its end stopper.

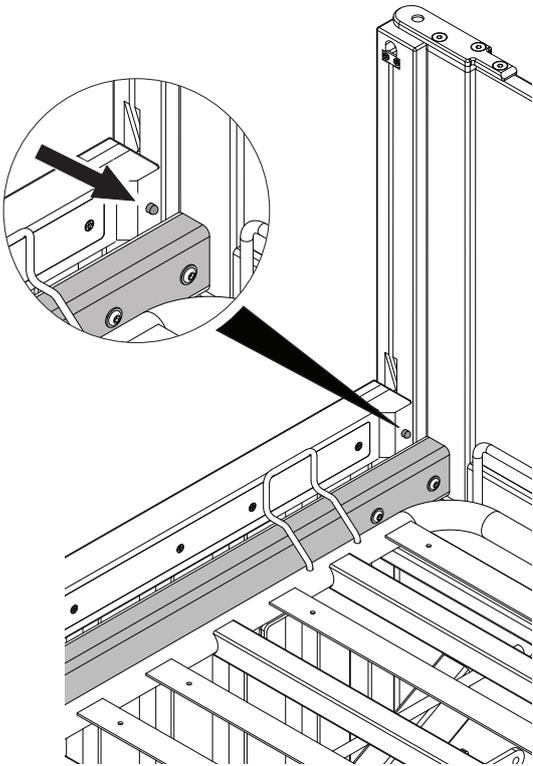

NOTICE!

Make sure that the two latches are in the correct position. If the latches are not in the correct position for any reason, raise the side rail until the two latches are in the correct position.

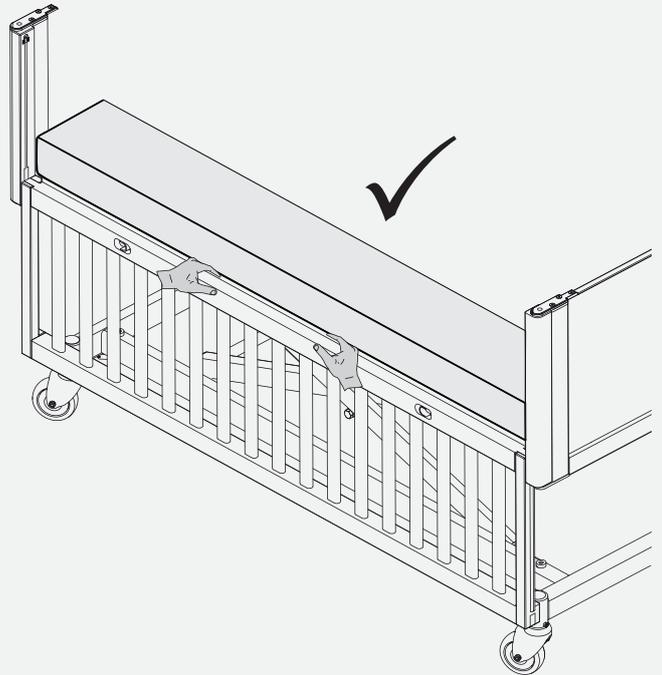

NOTICE!

The plunger stopper shall not be in contact with the mattress platform. Plunger stoppers are an additional safe mechanism to prevent the side rails from being unintendedly removed.

NOTICE!

Do not use the latches when the side rail is on the lowest position.

Raising the Side Rail

1. Pull the top bar upwards with both hands.
2. Ensure the locking pins at both ends engage with an audible click in the upper position and the side rail is properly locked.
